

**Quotes From Interview With Richard Katz, Software Designer  
CBS EVENING NEWS, 9/13/04**

RICHARD KATZ: If you were doing this a week ago or a month ago on a normal LaserJet printer, it wouldn't work. You just couldn't--there just--the font wouldn't be available to you.

RATHER: Katz also noted that the documents have both the so-called superscript T-H and a regular-size T-H. That would be common on a typewriter, not a computer.

KATZ: There is one document from May of 1972 which contains a normal T-H at the top. To produce that in Microsoft Word, you would have to go out of your way to type the letters and then turn the T-H setting off or back over them and type them again.
